Blast Communications provides premiere Internet connection services, the fastest connections possible at the best price. Using the newest in technology, Blast Communications provides users with broadband as you've never seen it before!
About Blastcomm

Blast Communications, based in Aurora IL, is a full service ISP, specializing in providing fast, affordable, broadband access Internet services.

Blastcomm utilizes DSL (Digital Subscriber Line) and wireless technology to connect home and business users to the Internet. BlastComm offers several packages catering to residential, small & medium sized business users and corporate America. Our wireless technology is geared specifically to those who need a fast, affordable and secure method of connecting to the Internet.

By forming strategic partnerships, BlastComm is able to offer a wide variety of technological products and services.

Exceeding your expectations

All relationships, whether personal or business, are based on connections. Blastcomm offers individuals and organizations the fastest, most reliable way to stay connected 24 hours a day! And it is the fastest connection to date.

DIAL-UP (56k) - our basic service - offers local dial nationwide. It is the perfect way to start out on the Internet.

ISDN (128K) - An upgrade from DIAL-UP, offers a digital dial in service, also with numbers nationwide. (Requires ISDN line from the local phone company)

DSL (144k -1.1M) - This is a "always on" connection at affordable prices. This is available nationwide but distance restrictions to local phone companies apply.

T-1 (1.5M) - This is our premier leased line service. Perfect for businesses who truly understand the value of staying connected. We offer very competitive prices and phenomenal service.

T-3 (45M) - This was developed for the high traffic internet companies. Perfect for high volume usage companies, such as schools or smaller ISPs.

SPECIALTY PRODUCTS:
Metered T-1 (1.5M) - This is a T-1 where you pay for USAGE rather than bandwidth. This is a cost effective T-1. Our clients typically save 60% compared to a traditional T-1. (Also available in a T-3 line)

Wireless - The highest of high-speed access. This "always on" bandwidth will cut your costs and offer you a much better bandwidth than any leased line.

MDU: Our specially designed system offers 1MB access to commercial & residential management companies. This system was developed as a Partnership program with minimal up-front-costs, if the minimum number of tenants enroll in the program.
